# Mimic Bus

## Ordering Information

The mimic bus symbols contained on the following pages are examples of those that have been produced for various customers in the past, in an effort to accurately reflect the switchgear that they are producing. These symbols are representative of the most common symbols that we manufacture. BW Industries, Inc has the ability to manufacture any custom mimic bus symbols that you may need for your requirements. The current symbols are all based on our most common 2" wide style, but can be customized in both size and color to meet your needs.

All of our mimic bus is reverse printed on the back side of a durable, 10mil textured *Lexan* material. It is then backed with 3M 467 Hi Performance adhesive, for peel and stick application. With this mimic bus manufacturing process, there is no longer a need to drill and tap thicker bus for application to the switchgear. Although the bus is extremely durable, it can be cut with an X-acto knife or a pair of scissors, if necessary, for seamless application.

If you don't see the desired symbols for your application, you can submit your artwork in .DXF or .DWG format, and we can quote and manufacture your bus from those files. If you intend on ordering from the following list of symbols, please refer to the Mimic Bus Color Legend and attached the desired color letter after the part #. Please feel free to contact us with questions regarding any of your mimic bus requirements.

Thank You!
